

Type: 1250 og 300

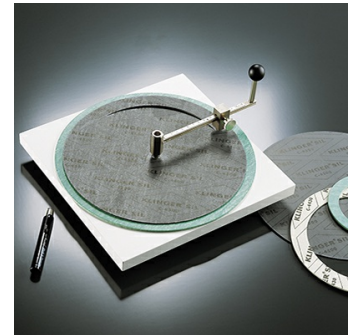

Gasket ring cutter machines

KLINGER Denmark offers gasket/ring cutter machines for the production of ring gaskets from fiber materials.

The ring gasket cutting machine is available in two variants: type 300 and type 1250, with the number indicating the maximum diameter of the cut ring.

Type 1250 can also be supplied with a motor, which makes cutting easier—especially when working with larger ring gaskets.

If you are interested in learning more about our gasket cutters, feel free to contact us for further details.

Application: Cut your own ring seals in fiber materials.

» Available with motor (Type 1250).

General data

Type: 1250 and 300

Type

Gasket ring cutter

Art. No.	Type	RING DIAMETER		DIKTE
